

Time seems to be going faster in the last year as compared to the previous 9 years of teaching in NJC. The drastic thinking and re-thinking of pedagogical tools, often involving ICT as well as my teaching beliefs, which I hold on so dearly to for many years.

Making reference to our principal, Mr Ang Pow Chew famous 'quote', "Is it about what you have taught or what the students have learnt that is more important?" This quote served as a good reminder in the period of Full HBL in 2020 when the entire country was experiencing circuit breaker. My entrenched pedagogical style in view of my limited ICT knowledge was challenged immensely. Being forced to change my pedagogical style for fear of losing my students' attention and interest was top on my list and this slowly evolves into a love for using blended learning tools to reach out to this very bunch of 'ICT-savvy youngsters'.

Teaching and learning is evolving and the teachers such as myself embrace the changes because of our love for students and our passion to want to help them excel propels us to take up these challenges.

NJCians are a diverse lot. They come from various backgrounds and contributed to our NJC culture, while at the same time influenced by it. NJCians who have graduated are contributing to the society in different ways and different areas, spanning across private and public sectors etc. It's always heartwarming to hear from these ex-NJCians how the education at NJC have moulded them.
